

Aurigin People

The admin guide

**The whole portal,
and the rules behind it.**

Written for admins — full visibility across the company, control of policy settings,
and the things to be careful with.

You can see everything, and change most of it

An admin account has the widest view in Aurigin People: every employee, every request, and the policy settings the whole company runs on. This guide covers what everyone sees first, then everything that's yours alone.

One place for the everyday

Check in and out, apply for leave or a work-from-home day, and see your balances without asking anyone.

Requests that don't get lost

Every leave and WFH request goes to the right approver with a clear status — Pending, Approved or Rejected — and the approver's comment comes back with it.

Your work, planned with you

Tell My Day what you're working on and it builds your to-do list and timeline; wrap up at the end of the day and it closes what's done. Every task is an issue on the team's boards, Jira-style.

The handbook, always to hand

The Employee Handbook lives in the portal. New joiners read and acknowledge it during onboarding, and it stays available afterwards.

GETTING STARTED

Your first five minutes

HR will give you a temporary password. From there it's four steps.

1

Sign in

Go to the portal and sign in with your work email and the temporary password HR gave you.

2

Set your own password

You'll be asked to change it straight away. Pick something only you know — HR can't see it, and nobody can recover it for you.

3

Read the handbook

New joiners are walked through the Employee Handbook and asked to acknowledge it. Read to the last page — the acknowledge button unlocks there.

4

Check in, then plan your day

On the Attendance page, press Check in (it opens at 9:15am; office hours are 10am – 7pm). Then open My Day and write what you're working on — it turns that into your plan.

Forgotten your password?

Ask HR to reset it. You'll get a new temporary one and be asked to change it again on your next sign-in.

The things you'll do most weeks

Attendance

10am – 7pm

Check in when you start and out when you finish. Check-in opens at 9:15am and closes at 7pm, and it's closed on Saturday and Sunday. Arriving after 10am isn't held against you — the time is recorded, and that's all. Leaving before 7pm is flagged — the day is still recorded — and if something genuinely came up you can mark it as an emergency, 2 days a month.

Leave

April to March

Earned, casual, sick and menstrual leave build up month by month, so your balance is what you've actually accrued. Earned leave accrues at 1.5 days a month, casual and sick at 0.58 each. Earned leave needs 7 days' notice; casual needs 2, or a week for more than 2 days — inside that, tick "genuine emergency". Your manager is emailed, and you're emailed when they decide.

Working from home

Manager approval

There's no fixed allowance — each day is agreed with your manager. Raise a request before the day and your manager is emailed; you're emailed when it's decided. For a same-day emergency, "Mark WFH" on the Attendance page records it immediately and lets your manager know.

Recognition

Saw someone do something good? Send kudos from the Recognition page. It's visible to the team, and it's the cheapest thing in here that makes the most difference.

Plan in the morning, wrap up before you leave

My Day turns a few plain sentences into your to-do list and timeline, and at the end of the day closes what got done. Your work reporters — the administrator, your manager and anyone HR adds — see a short digest of both.

1

Check in, then write your overview

My Day opens once you've checked in. After the morning discussion, write what you'll work on the way you'd say it — “Fix the login crash, build the pricing page, review Dhruv's PR. Next week: API docs.” Press Create my plan.

2

The AI builds your plan

Today's work becomes tasks with a type (Bug, Story or Task), a priority and a time slot, each filed into the project it belongs to. Anything you mention for later, or a bug you noticed but aren't fixing today, goes straight to the backlog, ready to be picked back up another day.

3

During the day

Change a task's status from the timeline, or open it to add detail, files or comments. Something new came up? Add more work — it's scheduled after what's already there.

4

Evening: write your summary

Before you leave, say what got done, what's half done, what blocked you, and any bug or follow-up you found. Press Close my day — finished work is closed, anything unfinished moves to the backlog, new bugs and follow-ups are added there, and your day is reviewed.

The review, and Performance

You get a score out of 100 for getting the planned work done, what went well, what to improve and a short note. It's stored day by day under Performance — you see yours; your manager, work reporters and HR see it too. Blockers outside your control aren't held against you, so mention them. Wrong type, or parked by mistake? Change it on the task.

Issues: every piece of work, in one place

Work lives in projects, each with its own key — WEB-12 is issue 12 in the Website project. Tasks from My Day are issues too, so everything shows up on the boards and in search.

Types and status

An Epic is a big piece of work holding Stories, Tasks and Bugs; any of those can be split into Sub-tasks. My Day's AI picks Bug, Story or Task for you. Status moves To Do !' In Progress !' In Review !' Done, with Blocked when something outside the issue is in the way. Planning says whether it's an active task, parked in the backlog, or in a sprint.

The issue page

Open any issue at /browse/KEY. Click the title or description to edit. Alongside: assignee, reporters, priority, labels, story points, sprint, epic, due date, and time tracking — the estimate, time logged and what's left. Log work as you go ("1h 30m").

Comments, mentions and files

Comment underneath; type @ and pick a name to mention someone — they're emailed and start watching. Attach images and files (up to 25 MB each) to the issue or to a comment. Watch an issue with the eye button to follow it.

Links and history

Link related issues — blocks, relates to, duplicates, clones — and both sides show the link. The History and Work log tabs record every change and every hour logged, with who and when.

Boards, backlog and search

Pick a project at the top of each page; the portal remembers your choice.

Board

Columns by status. Drag a card to move it. With a sprint running, the board shows that sprint; without one, it shows all open work. Filter to your own issues, recently updated or a label, and group by assignee or epic.

Backlog

Sprints on top, then Active tasks (work in hand) and the Backlog (work parked for later — unfinished days, later work and bugs from My Day, or moved there by a reviewer). Drag to reorder or move between them. The board leaves backlog items out.

Issues search

Every issue in one table, filtered by project, type, status, priority, assignee, reporter, label, sprint or text. Filters live in the address, so a search can be shared as a link, or saved — privately or for everyone. Built-in filters cover “My open issues”, “Watching” and more.

The bell and your inbox

The bell in the header lists what needs your attention — new issues where you're assignee or reporter, assignments, status changes, comments and mentions, leave and WFH requests and decisions. The same things arrive by email, with a button straight to the right page.

Your first few months

New joiners start on probation — 6 months by default. It's the settling-in period, and a couple of things work differently while it lasts.

- Leave still accrues every month, so nothing is lost. It can be taken once your probation is successfully completed.
- Work from home works as it does for everyone — agreed with your manager, day by day.
- Everything else — attendance, recognition, the directory, the handbook — works exactly as it does for everyone.

Being confirmed

Confirmation isn't automatic when the date passes — HR confirms you deliberately, after a look at how things have gone. Once confirmed, the leave you've built up can be taken from that moment.

Approving, and keeping an eye out

If people report to you, two extra things land on your plate — and both live where you'd expect them.

Leave and WFH approvals

You're emailed (and see it under the bell) when someone reporting to you asks for leave or WFH. Approve or reject under Approvals on the Leave and Attendance pages — the person is emailed the decision with your comment, so it's worth a sentence.

Your team's attendance

The Attendance page shows your team for any date you pick: who's in, who's remote, who's on leave, and which days were flagged.

A flagged day isn't a problem by itself

People have lives. The flag exists so patterns are visible, not so anyone gets caught out — and the emergency exceptions are there precisely for the genuine ones.

Sprints, reporters and your team's days

Managers, HR and admins — plus each project's lead and anyone made a project manager — run sprints. Everyone overseeing someone's work sees their days and performance.

Work reporters

The administrator and each person's manager oversee their work automatically. HR can add others on the employee's profile (Work reporters). Reporters are on every issue planned for that person, get their daily digest, and can see their My Day and Performance.

Running a sprint

In the backlog, Create sprint, drag issues in, then Start sprint — pick one to four weeks and a goal. One sprint runs at a time per project. Complete sprint from the board or backlog; unfinished work moves to the backlog, the next sprint or a new one.

Sprint report

Sprint reports (from the board or backlog) show what was done and what wasn't, with a burndown: remaining work each day against the ideal straight line — in story points when issues have them, otherwise in issues.

Bulk edit, and your team's performance

On Issues, tick rows (or all) and set status, priority, assignee or sprint in one go. On Performance, pick a person to see their daily scores, what they planned and what they reported.

The things only you can do

HR and admin accounts can see and change things the rest of the team can't.

Adding someone

Add an employee from the Onboarding page — give their company email, or let the portal make one. It creates the account and a one-time temporary password (shown once, so copy it before closing), builds their onboarding checklist, and sets the administrator as their manager unless you pick one.

Probation and confirmation

Each employee's profile has a probation card: confirm them, put them back on probation, or change the end date. Probation runs 6 months by default. Confirming is deliberate and is never triggered by the date alone.

Approvals, org-wide

HR and admins see every pending leave and WFH request, not just their own reports — useful when a manager is away and something needs a decision.

The new-hire checklist

Every new hire gets twelve tasks — welcome, documentation, IT setup, training and culture. Each task has an owner, and only its owner can tick it.

- The new hire ticks their own tasks — meeting the team and acknowledging the handbook happen in their welcome flow.
- HR ticks the HR and IT tasks: documents, payroll details, laptop, accounts, buddy and welcome kit.
- The new hire's manager ticks the training tasks: tools training and the 1:1 kickoff.
- Anyone else sees the checklist but can't change it.

Notes on each task

Add a note when you update a task — “Offer letter signed 28 Sep”, “Dell Latitude, S/N ...”, “Buddy: Dhruv”. It shows with who updated it and when. Keep the documents themselves where HR keeps them today: the portal records that something was done, not ID numbers or bank details.

Finishing onboarding

When every task is done, Mark active on the new hire's card. They stop seeing the onboarding checklist and carry on as a regular employee.

Changing the rules themselves

Under Settings, the policy numbers are yours to change. A change applies to everyone immediately, and leave balances are recalculated on the spot.

- Leave — days per month and the yearly cap for earned, casual, sick and menstrual leave; the days a year for optional holidays, marriage, paternity and leave without pay; and the month the leave year starts.
- Probation — default length (currently 6 months) and whether leave can be availed during it.
- Office hours — start and end (10am – 7pm), how early check-in opens (now 9:15am), whether late arrivals are flagged, and how many emergency exceptions a month.
- Notice periods, the 15-day earned-leave stretch and carry-forward come from the Employee Handbook and aren't editable here.

Two things worth knowing

The portal won't accept an end time at or before the start time — that would flag every day at once. And “Reset to defaults” puts every value back to what the portal shipped with.

Analytics

Headcount, attendance and leave trends across the company — visible to HR and admins only.

Permissions that are yours to grant

A few switches on an employee's profile are admin-only, because they change what someone can do across the portal.

Project managers

Only admins and project managers create, edit and archive projects. Tick Project manager on someone's profile to let them. Everyone can still create and work on issues inside existing projects, and each project's lead can edit it.

Test accounts

Tick Test account on a profile and check-in hours, weekends and leave rules (probation, notice, balance) stop applying to that account — and a closed My Day can be reopened. It's for trying every flow at any time. Never use it for a real employee.

Where the AI and email come from

Planning and reviews use Groq's gpt-oss-120b model; email goes from auriginmedia@gmail.com. Both are configured on the server. If either is unavailable, the portal keeps working — plans fall back to one task per line, and emails are skipped rather than failing the action.

REFERENCE

The rules, at a glance

As configured today. HR can change any of these under Settings, so treat the portal as the source of truth if the two ever disagree.

WHAT	HOW IT WORKS
Office hours	10am – 7pm; check-in opens 9:15am, closed Saturday and Sunday
Arriving late	Recorded, not flagged
Leaving early	Before 7pm is flagged
Emergency exceptions	2 days per calendar month
Leave year	April to March
Earned leave	1.5 days a month, up to 18 a year
Casual leave	0.58 days a month, up to 7 a year
Sick leave	0.58 days a month, up to 7 a year
Menstrual leave	1 day a month, up to 12 a year
Other leave	Optional holiday 2, marriage 5, paternity 5, leave without pay up to 15 — each per leave year
Notice for leave	Earned 7 days; casual 2 days (a week for more than 2). Inside that: mark it an emergency
Probation	6 months by default; confirmation is a manual HR step
Leave on probation	Accrues, but availed after confirmation
Work from home	With your manager's approval — there's no fixed number of days

If something isn't right

- Leave balance looks wrong? It's accrued to date, not your yearly total — a new joiner sees a small number on purpose. If it still looks off, ask HR.
- Can't apply for leave? Check whether you're still on probation; your Leave page will say so.
- Check In greyed out? It opens at 9:15am, closes at 7pm and is off on Saturday and Sunday.
- My Day planned something oddly? Edit or move any task on the board — the plan is a starting point, not a contract.
- Forgot to check out? Tell your manager — the day stays open, and an open day reads as leaving before 7pm.
- Anything about pay, contracts or personal records: HR, not the portal.
- Balances changed unexpectedly for everyone? Someone edited the accrual rates under Settings — they apply immediately and recalculate on the spot.
- Need the original policy numbers back? Settings !' Reset to defaults restores what the portal shipped with.
- Analytics and Settings are admin/HR only; employees and managers never see them.

Who to ask

The Employee Handbook is the policy reference; the Settings page is where those numbers are actually enforced. If the two disagree, fix the one that's wrong rather than leaving both.

It's yours to run.

The portal is meant to stay out of your way. If it ever doesn't, say so — it's ours, and it can change.
